VALVE TECHNOLOGY

Veloci-T

Tip Assembly
by CONCOR Tool & Machine

The design has deep smooth flute area on the tip allowing a "free flow" of material off the screw. Concor's Veloci-T® free flow design has improved shut-off over other free flow valves. Most of Concor's customers prefer the Veloci-T® free flow 3 piece design. Many are in stock.

FEATURES & BENEFITS

- Less restrictive than 4 piece or ball check designs - reduced wear and material degradation
- Ideal for shear sensitive material such as PC, ABS, PVC, because the ring floats "free"
- The ring does not rotate with the screw, minimizing barrel wear
- Design allows for processing a variety of materials - provides flexibility for custom molding
- Veloci-T® tips provide large front ring target area and double angle rear seat to assure positive shut off of low viscosity (i.e. Nylon) and high filled resins - minimize scrap
- Veloci-T® tips are made of CPM M4 HIPED (Hot Isostatic Pressing Powdered Metal) resistance to heat, impact and rotational wear of contact surfaces - extended wear life / reduced cost
